

BIRWAZ: The Future of Personalised Studio Experiences

#Project of IT320 Supervised By: Dr.Ghaida Al-Fayez

The Rise of Personalised Experiences

Clients today demand bespoke experiences in events and photography, envisioning unique studio setups that match their style and vision.

However, generic, off-the-shelf studio packages often disconnect from client expectations, leading to compromise and unmet creative potential. BIRWAZ revolutionizes this. Our intuitive platform allows clients to design, visualize, and book their dream studio setups, easily bringing unique ideas to life.

The Problem: Rigid Packages & Uncertainty

Clients desire a private studio space that reflects their personal taste for significant occasions. However, the current market forces a compromise between vision and reality.

Lack of Flexibility

Most studios offer limited, fixed packages, restricting creative expression.

Wasted Time

Clients must visit multiple locations to find a match, wasting valuable effort.

Visual Uncertainty

Without a preview, the final outcome remains a gamble until the event day.

The Solution: Virtual Design & Certainty

Enter BIRWAZ: An e-platform empowering clients to virtually design their studio before booking. From lighting to decor, every element is customisable.

VirtualStudioBuilder

Modify backgrounds, decorations, and lighting with intuitive online tools.

Live Preview Accuracy

See exactly what you book. The preview feature eliminates the gap between expectation and execution.

Seamless Booking

Save time by making all design decisions online, increasing satisfaction and reducing errors.

User Interactions

The following **Use Case Diagram** illustrates the primary interactions between the Actors (Clients and Admins) and the BIRWAZ system ecosystem.

System Architecture

A robust, scalable architecture ensures reliability and performance. The system is structured to handle real-time rendering and secure transactions effectively.

Testing & Validation Results

Our comprehensive evaluation, including User Story Acceptance, Integration Testing, and User Acceptance Testing (UAT), confirms the system's readiness.

Key Findings

- **Functional Success:** The system meets all essential functional requirements.
- **Task Completion:** Users successfully customised studios and finalised reservations without error.
- **High Satisfaction:** Usability and responsiveness received top marks.
- "The preview feature eliminates the gap between customer expectation and execution."

UAT Satisfaction Rate

90% of participants expressed overall satisfaction with the system's usability and key features.

Thank You!
